

SYLLABUS

1. Data about the program of study

1.1 Institution	Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Electronics, Telecommunications and information Technology
1.3 Department	Bases of Electronics
1.4 Field of study	Electronic Engineering, Telecommunications and Information Technologies
1.5 Cycle of study	Bachelor of Science
1.6 Program of study / Qualification	Applied Electronics / Engineer
1.7 Form of education	Full time
1.8 Subject code	39.00

2. Data about the subject

2.1 Subject name	Digital Signal Processing						
2.2 Subject area	Theoretical area						
	Methodical area						
	Analytic area						
2.3 course responsible	Assoc.Prof. Lăcrimioara-Romana GRAMA, PhD eng – Lacrimioara.Grama@bel.utcluj.ro						
2.4 Teachers in charge with laboratory	Assoc.Prof. Lăcrimioara-Romana GRAMA, PhD eng – Lacrimioara.Grama@bel.utcluj.ro Eng. Carla-Mihaela BULZESCU – Carla.Bulzescu@bel.utcluj.ro						
2.5 Year of study	III	2.6 Semester	2	2.7 Assessment	Exam	2.8 Subject category	DD/DI

3. Estimated total time

3.1 Number of hours per week	4	Of which: 3.2 course	2	3.3 laboratory	2
3.4 Total hours in the curriculum	75	Of which: 3.5 course	28	3.6 laboratory	28
Distribution of time					hours
Manual, lecture material and notes, bibliography					6
Supplementary study in the library, online specialized platforms and in the field					1
Preparation for seminars / laboratories, homework, reports, portfolios and essays					6
Tutoring					3
Exams and tests					3
Other activities: NA					0
3.7 Total hours of individual study	19				
3.8 Total hours per semester	75				
3.9 Number of credit points	3				

4. Pre-requisites (where appropriate)

4.1 curriculum	Mathematical Analysis, Linear Algebra, Applied Informatics, Special Mathematics, Differential Equations, Electronic Devices, Computer Aided Graphics, Signals and Systems, Digital Integrated Circuits, Circuits Analysis and Synthesis, Systems with Digital Integrated Circuits, Software Engineering
4.2 competence	Knowledge of mathematics, signal theory, electronic devices, digital integrated circuits; use of MATLAB development environment

5. Requirements (where appropriate)

5.1. for the course	Amphitheatre (with blackboard/whiteboard and video projector), Cluj-Napoca – if onsite; PC/laptop + graphical tablet – if online
5.2. for the seminars/ laboratories/ projects	Laboratory (with computers and blackboard/whiteboard), Cluj-Napoca – if onsite; PC/laptop – if online

6. Specific competences

Professional competences	<p>C2 Applying the basic methods for the acquisition and processing of signals</p> <ul style="list-style-type: none"> • C2.1 Temporal, spectral and statistical characterization of signals • C2.2 Explaining and interpreting the methods of signal acquisition and processing • C2.3 Use of simulation media for signal analysis and processing • C2.4 Use of specific methods and tools for signal analysis <p>C3 Application of the basic knowledge, concepts and methods regarding the architecture of computer systems, microprocessors, microcontrollers, programming languages and techniques</p> <ul style="list-style-type: none"> • C3.4 Elaboration of programs in a general and/ or specific programming language, starting from the specification of the requirements to the execution, debugging and interpretation of the results in correlation with the processor used • C3.5 Development of projects involving hardware components (processors) and software components (programming)
Cross competences	CT1. Methodical analysis of the problems encountered in the activity, identifying the elements for which there are established solutions, thus ensuring the fulfillment of professional tasks

7. Discipline objectives (as results from the key competences gained)

7.1 General objective	<p>Development of professional skills in the field of</p> <ul style="list-style-type: none"> • Discrete-time signals and systems analysis and synthesis, • Digital filter design
7.2 Specific objectives	<ul style="list-style-type: none"> • Assimilating theoretical knowledge regarding signal and system analysis, digital filter design using appropriate software tools (MATLab) • Interpretation of specific phenomena from signal analysis using <ul style="list-style-type: none"> ○ Fourier transform, ○ Discrete Fourier transform, ○ Fast Fourier transform • Obtaining the skills to implement and evaluate the performance of digital filters

8. Contents

8.1 Lecture (syllabus)	Teaching methods	Notes
1. Course overview. Introduction to digital signal processing	Presentation, heuristic conversation, exemplification, problem presentation, teaching exercise, case study, demonstration, questioning	Use of blackboard and video projector (if onsite)/ Use of presentation + graphical tablet (if online)
2. Discrete-time signals and systems		
3. Analysis of discrete-time linear time invariant systems		
4. Direct-form implementation of discrete-time systems. Linear time invariant systems characterized by difference equations		
5. The z-transform		
6. z-domain analysis of LTI systems. Fourier series for discrete-time periodic Signals		
7. Fourier transform for discrete-time aperiodic signals and frequency domain characteristics of LTIS		

8. Discrete Fourier transform		
9. Fast Fourier transform. LTIS as frequency selective filters.		
10. Linear-phase FIR filters. Design of digital FIR filters		
11. Design of digital IIR filters. Implementation of discrete-time FIR systems		
12. Implementation of discrete-time IIR systems		
13. Quantization		
14. Digital signal processing summary. Exam example

8.2 Laboratory	Teaching methods	Notes
1. Introduction to MATLAB		
2. Discrete-time signals		
3. Sampling of analog signals. Correlation		
4. Discrete-time linear time-invariant systems		
5. z-Transform and z-Domain Analysis of Linear Time-Invariant Systems		
6. Practical evaluation from laboratories 1 - 5 (laboratory test): 30 minutes for each student. Responses to questions		
7. Fourier transform and discrete Fourier transform		
8. Linear and circular convolution		
9. Discrete-time linear time-invariant systems as frequency selective filters		
10. Finite impulse response filters. Design methods		
11. Infinite impulse response filters. Indirect design methods		
12. Practical evaluation from laboratories 7 - 11 (laboratory test): 30 minutes for each student. Responses to questions		
13. Seminar - Implementation of discrete-time systems		
14. Seminar

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

The discipline content and the acquired skills are in agreement with the expectations of the professional organizations and the employers in the field, where the students carry out the internship stages and/or occupy a job (in the field of signal analysis, and of design, simulation and testing digital system), and the expectations of the national organization for quality assurance (ARACIS).

10. Evaluation

Activity type	10.1 Assessment criteria	10.2 Assessment methods	10.3 Weight in the final grade
10.4 Course	The level of acquired theoretical knowledge and practical skills	WE – Summative evaluation <ul style="list-style-type: none"> written exam (problems solving) – if onsite quiz (theory and problems) – if online the grade obtained on WE also consider the activity during the semester: B – Continuous formative evaluation (classes attendance and responses to questions during lecture class; grades obtained from quizzes) 	-WE, max. 10 pct., 60%
10.5 Seminar /Laboratory	The level of acquired knowledge and abilities	PE – 2 formative evaluation tests (practical lab exam – exercises must be implemented in MATLAB) <ul style="list-style-type: none"> the grades obtained on these tests also consider the activity during the semester (problem solving and implementation; responses to questions) 	-PE1, max 10 pct., 20% -PE2, max 10 pct., 20%
10.6 Minimum standard of performance			
Quality level: Minimum knowledge: <ul style="list-style-type: none"> Knowledge of the main type and properties of discrete-time signal and systems Knowledge of the main transforms used for digital signal processing Minimum competences: <ul style="list-style-type: none"> Apply methods of analysis and synthesis of discrete-time signals and systems Design digital filters (FIR & IIR) for different applications Interpret the data obtained from analysis of discrete- time signals and systems Quantitative level: <ul style="list-style-type: none"> $WE \geq 4$ and $0.6WE + 0.2PE1 + 0.2PE2 \geq 4.5$ Final grade = $0.6(WE+ B) + 0.2PE1 + 0.2PE2$ 			

Date of filling in:	Responsible	Title surname NAME	Signature
25.06.2024	Course	Assoc.Prof. Lăcrimioara-Romana GRAMA, PhD eng.	
	Applications	Assoc.Prof. Lăcrimioara-Romana GRAMA. PhD eng Eng. Carla-Mihaela BULZESCU	

Date of approval in the Department of Bases of Electronics 26.06.2024	Head of Department Prof. Sorin HINTEA, Phd eng
Date of approval in the Council of Faculty of Electronics, Telecommunications and Information Technology 11.07.2024	Dean Prof. Ovidiu POP, PhD eng
