

# **SYLLABUS**

# 1. Data about the program of study

1.1 Institution	Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Electronics, Telecommunications and information
,	Technology
1.3 Department	Communications
1.4 Field of study	Electronic Engineering, Telecommunications and Information
1.4 Field Of Study	Technologies
1.5 Cycle of study	Bachelor of Science
1.6 Program of study / Qualification	Telecommunications Technologies and Systems/ Engineer
1.6 Program of Study / Qualification	Applied Electronics/Engineer
1.7 Form of education	Full time
1.8 Subject code	TST-E50.20/EA-E51

#### 2. Data about the subject

	_					
2.1 Subject name	Digital	Image I	Processing			
	Theore	etical ar	ea			
2.2 Subject area	Metho	dologic	al area			
	Analyt	ic area				
2.2 Course responsible		Assoc.	Prof. Mihaela GORDAN,	Ph.	D -	
2.3 Course responsible		<b>Mihael</b>	a.Gordan@com.utcluj.r	<u>0</u>		
2.4 Teacher in charge wit	h seminar /	Acciet I	Prof Camplia FLOREA D	)h r	– Camelia.Florea@com.	utolui ro
laboratory / project		ASSIST.	PIOI. Calliella FLOREA, P	111.L	- <u>camena.riorea@com.</u>	utciuj.10
2.5 Year of study IV	2.6 Semeste	r 7	2.7 Assessment	٧	2.8 Subject category	DS/DO

# 3. Estimated total time

3.1 Number of hours per week	4	of which: 3.2 course	2	3.3 project / laboratory	2
3.4 To Total hours in the curriculum	56	of which: 3.5 course	28	3.6 project / laboratory	28
Distribution of time	•		•		hours
Manual, lecture material and notes, b	ibliog	raphy			10
Supplementary study in the library, o	nline s	pecialized platforms ar	nd in the	e field	10
Preparation for seminars / laboratorion	es, hor	nework, reports, portf	olios and	d essays	14
Tutoring					5
Exams and tests					5
Other activities:					0

#### **4. Pre-requisites** (where appropriate)

3.7 Total hours of individual study

3.8 Total hours per semester

3.9 Number of credit points

4.1 curriculum	Linear Algebra; Signals and Systems; Computer Programming
4.2 competence	Basic programming skills; basic use of image image manipulation programs

44

100

Facultatea de Electronică, Telecomunicații și Tehnologia Informației

# 5. Requirements (where appropriate)

5.1. for the course	
5.2. for the seminars / laboratories / projects	

6. Speci	fic competences
Professional competences	<ul> <li>C4. Design, implementation and operation of data, voice, video and multimedia services. This is based on the understanding and the application of fundamental concepts in telecommunications and transmission of information</li> <li>C4.2 Solving practical problems using general knowledge about the multimedia techniques – in particular: select, develop and implement software algorithms for:         <ul> <li>image down-sampling/up-sampling, brightness quantization as required for the transmission and storage of digital images in a communication system;</li> <li>image enhancement, e.g. contrast enhancement, image de-blurring, noise removal, to overcome the practical problems occurring during the acquisition and transmission of digital images in a communication system;</li> <li>image analysis, coding and compression for different applications – e.g. environment surveillance, security, medical imaging, virtual reality</li> <li>C4.3 Explanation and interpretation of the main requirements and specific approaches to data, voice, video and multimedia transmissions – for the particular case of digital images and video, with emphasize on:</li></ul></li></ul>
Transversal competences	N/A

# 7. Discipline objectives (as results from the key competences gained)

7.1 General objective	Developing professional competences regarding the acquisition, processing, analysis, compression and transmission of digital images, from the point of view of understanding the theoretical fundamentals and of their integration in practical applications
7.2 Specific objectives	<ol> <li>Understanding the basic concepts regarding the acquisition, processing (specific for communications systems: image enhancement, noise suppression, image restoration), compression and analysis of digital images (for machine vision applications)</li> <li>Developing skills and abilities to design and implement image processing algorithms, image compression algorithms and image analysis/object recognition algorithms</li> <li>Developing skills and abilities to integrate basic image processing,</li> </ol>

Facultatea de Electronică, Telecomunicații și Tehnologia Informației

	analysis and compression algorithms in practical applications specific
	to multimedia communications systems
4.	Developing skills and abilities needed to implement and verify the
	performance of digital imaging systems

#### 8. Contents

8.	Contents		
8.1	Lecture (syllabus)	Teaching methods	Notes
1.	Course description. General notions regarding the processing, analysis and coding/compression of digital images.  Mathematical representation of grey scale and color digital images.		
2.	Image acquisition. Image sampling/down-sampling: the sampling theorem in the 2-D space, the Nyquist rates, the alias effect. Image reconstruction from its samples / image upsampling.		
3.	Brightness/color quantization: general process; uniform quantization; optimal (MMSE) quantization; visual quantization.		
4.	Transform-based digital image representation. Unitary separable two-dimensional image transforms. Properties and applications. Applications of transform-based image representation: compression and coding; image denoising; image analysis/object recognition.		
5.	Two-dimensional unitary sinusoidal image transforms (DFT, DCT); two-dimensional unitary rectangular image transforms (Walsh, Haar).	Duccoutation, ovalenation,	
6.	Applications of transform-based image representation: compression and coding; performance of transform based image compression. Image denoising in the transform domain.	Presentation; explanation; demonstration; debates; conversation; learning through discovery	
7.	Histogram statistics of digital images. Grey scale transformations for image enhancement; contrast enhancement algorithms.		
8.	Spatial image filtering for image enhancement: low-pass spatial filtering and image denoising; unsharp masking; high-pass and band-pass spatial filtering. Applications of image enhancement in communication systems and medical imaging systems.		
9.	Digital image analysis: structure of an image analysis system; key components of an image analysis system. Image features classification; categories of hand crafted features; feature extraction; feature selection.		
10	Edge based image features; edge detection. Edge linking; boundary extraction. Texture representation; texture descriptors.		
11	Digital image segmentation. Region-based and contour-based image segmentation methods. Image segmentation in the feature space; spatially constrained image segmentation.		

Facultatea de Electronică, Telecomunicații și Tehnologia Informației

Morphological image filtering/analysis.
12. Object descriptors: contour descriptors; shape descriptors; geometrical descriptors; statistical moment features for object recognition.
13. Basic concepts regarding image and video coding and compression. Losless vs. lossy video compression. Video coding principles.
14. Topics review and synthesis. Preparation for the final verification.

# 9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

The discipline content and the acquired skills are in agreement with the expectations of the professional organizations and the employers in the field, where the students carry out the internship stages and/or occupy a job (in the field of computer vision, digital imaging, multimedia systems engineering, multimedia communications, computer graphics), and the expectations of the national organization for quality assurance (ARACIS).

#### 10. Evaluation

Activity type	10.1 Assessment criteria	10.2 Assessment	10.3 Weight in
		methods	the final grade
10.4 Course	The level of acquired theoretical knowledge and practical skills	Written test (theoretical	
		questions and	60%
		numerical exercises)	
10.5 Laboratory	The level of construction discounts does and abilities	Labaratanina	450/
	The level of acquired knowledge and abilities	Laboratory reports	15%
10.6 Project	The level of acquired knowledge and practical skills	Project evaluation	
		(theoretical	
		presentation, software	25%
		implementation,	
		results)	

#### 10.6 Minimum standard of performance

#### Qualitative level:

Minimal knowledge:

- ✓ Know the basic concepts specific to the acquisition, representation and processing of a digital image.
- ✓ Understand the role and applications of most common image enhancement algorithms.
- ✓ Know the difference between grey scale transformations, spatial operations and transform domain operations
- ✓ Understand the application of image transforms to image data compression
- ✓ Know the basic concepts involved in image analysis systems

## Facultatea de Electronică, Telecomunicații și Tehnologia Informației

- ✓ Know the most frequent feature extractors in computer vision systems Minimal competences:
  - ✓ To be able to define (conceptually) the notions mentioned above.
  - ✓ To be able to solve numerical exercises applying the algorithms listed above
  - ✓ To be able to recognize the image processing algorithm applied, based on the input image and the output result.

### Quantitative level:

- ✓ Do all the laboratory works
- ✓ Finish the project
- ✓ The grade for the written test should be at least 4.5.
- ✓ The grade for the laboratory reports should be at least 5.
